Cross-epoch falsification: H_0^{glob} vs inflationary α (LiteBIRD measures $r \Rightarrow \alpha$; this shifts the UV prediction)
$s_K^{\mathrm{full}}(\alpha)$
$\alpha = \varphi^4/3 = 2.2847$ (this work)
IR limit $s_K^{IR} = 0.40330$
UV value: 0.41691
$H_0^{\mathrm{glob}}(\alpha) = H_0^{\mathrm{SH0ES}}(1-f)$
$3(\varphi+\pi)^2 = 67.9621$ (pure target)
$H_0^{\mathrm{glob,\,UV}} = 67.96214$
H_0^{glob} [km s^{-1} Mpc^{-1}]
α-attractor curvature parameter
